**Subsector B33: BUILDING DESIGN**

---

<b>Subsector :</b>	B33	<b>Registration Date :</b>	2015-05-15
<b>Organization :</b>	SN		
<b>Country :</b>	Norway		
<b>Project ID :</b>	NOT15003/0001		Published Standard
<b>ICS :</b>	91.120.20		
<b>National Ref :</b>	NS 8178:2014		
<b>Title :</b>	Acoustic criteria for rooms and spaces for music rehearsal and performance		
<b>Scope :</b>	This standard specifies differentiated criteria for acoustic conditions and characteristics for spaces used for music rehearsal and performance. The criteria are specified for different types of music, regardless of the type of building in which the spaces are located. The standard provides criteria for room acoustics in spaces used for music rehearsal and performance, whether this is the primary use of the spaces or they are multi-purpose spaces. Together with the acoustic criteria, requirements are also given for room height, net room volume and net area. Criteria for acoustic conditions are differentiated on the basis of three music types: amplified music, quiet music and loud music. Definitions of these are given in clause 3. The standard is intended to be used in the planning of new buildings and the refurbishment of existing ones. The standard can also be used to assess the suitability of existing spaces for different musical purposes. The standard can be used for the adjustment of rooms and spaces whose primary purpose is not music rehearsal and performance. This		

---

can be done by using flexible solutions or by choosing a range of use which can be combined, for example in gymnasiums, classrooms, assembly halls, multi-purpose halls, etc. The criteria in this standard are not intended to be applied to large specialized concert halls, opera venues and similar spaces which are basically designed for concerts and performances. For music rooms, the limit values for background noise and sound insulation are given in clause 7 in NS 8175:2012. For other types of rooms and spaces whose primary purpose is not music rehearsal and performance, limit values for the background noise from technical installations are stated for the actual room types in class C in NS 8175:2012. The standard does not deal with the need for logistics, storage rooms for instruments and other key support functions relating to music rehearsal and performance

<b>Title :</b>	Motor fuels - Special petrol for powered implements		
<b>Scope :</b>	Motor fuels according to this standard are intended for power tools where requirements on properties influencing the working environment and the external environment are particularly high. The petrol can be used in engines that are now in use or marketed without modification. Special petrol according to this standard does not meet the requirements for motor vehicles on the road and should not be used there. Motor fuels referred to in this standard are fuels consisting of liquid hydrocarbons together with any additives for the operation of internal combustion engines with electric ignition, Otto engines. The standard covers fuels both with and without added two-stroke oil. The standard applies to motor fuels intended for delivery to the final consumer. Motor fuels containing oxygenates are not covered by this standard.

**National Ref :** NEN 7393:2015 Concept nl  
**Title :** Water quality - Determination of adenosine tri phosphate (ATP)  
**Scope :** NEN 7393 describes a method for the quantification of the total ATP content in water. The standard applies to the microbiological analysis of water, unless the nature of the test sample disturbs the analysis. Adenosine tri-phosphate is an energy-rich compound which is present in all living cells and is therefore a measure of the active biomass. Upon the dying of living cells, ATP can also occur in water outside the cell (extracellular ATP). The total ATP content (intracellular and extracellular ATP) is measured in a solution, after the rupture of the cell walls, by means of chemo-luminescence which is released after the reaction with a luciferin/luciferase solution.

<b>Title :</b>	Water quality. Chloride determination. Potentiometric method.		
<b>Scope :</b>	This standard describes a method for the quantitative determination of chloride in water by potentiometric titration with silver nitrate with a glass electrode and silver-silver chloride.		

This method is suitable for the determination of chloride in coloured or turbid water that would difficult the colour of the target endpoint for other methods. The potentiometric method can be used without pretreatment samples containing ferric ions (if it is not present in higher concentrations than chlorides), chromate, phosphate, ferrous and other heavy metal ions.
