<b>National Ref :</b>			
<b>Title :</b>	Tourism services - Classification of accommodation establishments - Category hotel, hotel garni, pension, motel and boatel (accommodation in cabins of the permanent moored passenger ship)		
<b>Scope :</b>	This standard establishes condition for classification of accommodation establishment (category hotel, hotel garni, pension, motel and boatel). The requirements for classification are in conformity with requirements of other European countries. After the first stage of system functioning in the years 2010-2012, it was necessary to assess possible improvements. Based on this assessment, it was decided to make partial modifications in the classification for category of pension

<b>Country :</b>	Latvia	<b>Latest Date for Comments :</b>	2016-07-07
<b>Project ID :</b>	00058718/0001		Project Established
<b>ICS :</b>	91.100.30		
<b>National Ref :</b>	LVS 156-1		
<b>Title :</b>	Concrete - National annex of Latvian standard to European standard EN 206:2013 Concrete - Specification, performance, production and conformity		
<b>Scope :</b>	The standard contains national provisions for the concrete specifications, which have to be considered assessing suitability of the concrete for the construction in climatic conditions of Latvia. The provisions of the standard are based on the provisions of the European Standards for concrete as well as constituent materials and it shall be used together with those standards. This standard is only operable together with LVS EN 206 . This standard contains test methods for determination of the freeze/thaw resistance. The standard contains provisions for the conformity assessment of the concrete in Latvia.

**National Ref :** ÖNORM ISO 18488  
**Title :** Polyethylene (PE) materials for piping systems - Determination of Strain Hardening Modulus in relation to slow crack growth -- Test method  
**Scope :** This Standard specifies a method for the determination of the strain hardening modulus which is used as a measure for the resistance to slow crack growth of polyethylene. The strain hardening modulus is obtained from stress-strain curves on compression moulded samples.  
 This Standard describes how such measurement is performed and how the strain hardening modulus shall be determined from such a curve. Details of the required equipment, precision, and sample preparation for the generation of meaningful data are given.  
 This Standard provides a method that is valid for all types of polyethylene, independent from the manufacturing technology, comonomer, catalyst type, that are used for pipes and fittings applications.
