Institute of Sonology, University of the Arts,  
The Hague, NL

## Milieu, Unconstrained

The lecture takes place in the context of the conference  
'Entangled Milieus: Co-constituting a shared futurity'.

These days the milieu appears increasingly multiple. The seemingly situated-local inevitably enmeshes complex distributed counterparts, at times far exceeding scopes of its locales. Together with shifting notion of 'site', space today appears formatted in multi-layered, heterogeneous, poly-temporal agencies that incorporate diffuse and discontinuous fields of relational interactions. But within this patchwork of intermingling territories, what are the *dynamics* of entanglement and *structures* of relational exchange? And how, in turn, do particular dynamic modes and environmental circuits enforce specific features of a milieu? Following terrestrial linkages and contextual reciprocities latent to the surrounds provides some clues. It also opens up a dense expanse that challenges the discreteness of meaning and tests the limits of comprehension / tangibility. This talk begins with the recent Nord Stream pipeline sabotage incident as a portal into a tangle of material-contextual interlinks that question the extents and dynamics of interwoven milieus.

Raviv Ganchrow researches the interdependencies of sound, locale and hearing through installations, writing, and the development of transduction technologies. His sound works attend to spatial-material manifestations of oscillations in conditions such as environmental infrasound, telluric currents, long-range radio, ocean acoustics, and anechoic chambers. Recent installations employ in-situ circuits patched directly into locales, relaying contextual dynamics. He publishes, workshops, and lectures broadly on auditory contexts and the spatial-material agency of sound and is currently a faculty member at the Institute of Sonology, University of the Arts, The Hague.
